

Keeping you well connected

The mining industry is in a period of dramatic change. Companies are under increasing pressure to deliver high quality, validated and trusted data at a faster pace.

To increase efficiencies, reduce costs and remain competitive, mining companies must embrace digital transformation.

They must invest in and implement smarter, data-driven solutions to keep their enterprises agile and efficient.

By embracing the digital revolution mining companies can stay ahead of the curve.

It’s all about collecting and analysing data to improve efficiency.

But simply collecting or even aggregating data isn’t enough. The amount of data doesn’t matter – it’s what you do with the data that counts.

Businesses need the right tools and systems to be able to extract, store, analyse, manage and protect their data.

Smart software solution

That’s where Intov8’s **Corvus Axiom** comes in.

Corvus Axiom software has been developed by miners for miners.

This revolutionary data management software solution automates and analyses mining production systems.

It connects directly with your existing fleet and plant monitoring systems, bringing multiple sources of information together for powerful results.

You’ll get visibility over the data being reported and the ability to export to other business systems and software using purpose-built, Intov8-certified data access tools.

By linking data to your business process, you’ll be able to make decisions for improvement quickly and accurately.

The engine room

Corvus Axiom is at the core of everything we do. It’s our host system. Our engine room.

This software package manages everything that happens on a mining site.

It collects vital data, stores it, processes it and visually displays it.

It’s the same program that enables one of our clients to process 1.6 billion data transactions a day (about 20,000 per second).

KEY BENEFITS

DELIVERS a total data-driven solution

AUTOMATES and analyses mining production systems

INCREASES efficiencies

IS EASILY integrated with other systems

DELIVERS greater accuracy and reliability

TRANSLATES data into ONE language

PROCESSES data in near real time

DELIVERS traceability, visibility and transparency

PRACTICAL and easy-to-use.

INCREASES productivity and profitability

Delivering excellence without compromise

Intov8’s **Corvus Axiom** software program provides a total digital solution for the mining industry.

It is the most advanced, reliable and robust software package of its kind.

Corvus Axiom delivers significant time savings, boosting productivity and profitability.

With **Corvus**, supervisors and staff can work more efficiently – with less stress.

The program features 35 integrations embracing vital areas including:

- Quality
 - Maintenance
 - Administration
 - Statutory reporting requirements
- Personnel
 - Management
 - Safety
 - Security
 - Warehousing

With **Corvus Axiom** you can efficiently manage:

- Quality data
 - Data sources
 - Analysis
 - SCADA
 - Documents
 - Customers
- Schedules
 - Source systems
 - Machine groups
 - Resources
 - Rosters
 - Competency levels
- Roles
 - Role classifications
 - Mappings
 - Registers (including freight)
 - Projects
- Incidents and issues
 - Hazards
 - Risks
 - Compliance
 - Plant events
 - Shipping events
- Personnel events
 - Shift logs
 - Shift status
 - Templates
 - Testing

Corvus Axiom delivers excellence without compromise.

Proud track record

Intov8 provides software solutions to some of the world’s largest mining companies.

Our software has been developed by miners for miners. We have a deep understanding of the mining industry worldwide. Our team has proven experience in mine systems development, business improvement, system integration and mine production analysis.

The **Corvus** suite of products and our experienced implementation team can create a solution to minimise your downtime and increase productivity.
