

SHORT INTERVAL CONTROL

DATA SHEET

Fixing problems as they occur

The ability to monitor site operations in real time has significant advantages for the mining industry.

With Intov8's innovative Short Interval Control (SIC) solution, supervisors can now work more efficiently and oversee problems as they occur.

During a shift, supervisors can identify issues that may affect production and take immediate action to rectify those problems. Our unique **Corvus Wall** software gives supervisors an instant snapshot of mine operations on mobile devices, desktop computers and display monitors.

Other companies provide Short Interval reporting – often via email – but that outdated process can result in costly delays.

Intov8 takes it a giant leap further.

We go beyond just reporting

Corvus Wall for Short Interval Control goes beyond Short Interval reporting by:

- Opening lines of communication between key personnel on site to enable an instant response.
- Allowing supervisors to comment and interact directly with operators in the field. They can now manage their team to act quickly on any decisions or changes.
- Enabling supervisors to understand problems that occur at a glance – and in real time.
- Giving supervisors the ability to make instant decisions from information provided rather than waiting for lengthy reports to be processed.

Corvus Wall streamlines the entire process.

Using **Corvus Wall**, **Corvus Live Monitor** and **Corvus Dashboard** mobile apps, supervisors can take immediate action to address problems that may affect production – including weather delays, breakdowns, damaged or faulty vehicles and long truck queues at loaders.

Corvus is widely recognised by industry as one of the premier business intelligence solutions on the market today.

KEY BENEFITS

ALLOWS for Short Interval Control (SIC) from a mobile device

PROVIDES a cost-effective software solution

SIMPLIFIES the entire process and transforms the way mines manage their data

ENABLES supervisors to monitor operations in the field

PROVIDES live access to key metrics

GIVES supervisors a window into the mine and equipment status in near real time

SUPERVISORS can comment and interact directly with operators in the field

REDUCES reporting time by identifying and addressing issues in near real time

INTEGRATES to any source system

REDUCES downtime

INCREASES productivity and profitability

Easy integration with current systems

You can partner **Corvus** with any data source for practical, cost-effective solutions.

A simple way to analyse and automate systems

Practical, easy-to-use applications that enhance information and improve operational efficiency.

Increased productivity and profitability

Identify challenges and opportunities then adjust in real-time for better productivity.

- Immediate and measurable operational and financial benefits
- Practical, easy-to-use applications that enhance information and improve operational efficiency.
- Ground-breaking new mobile apps **Corvus Live Monitor**, **Corvus Dashboard** and **Corvus Wall** that provide a window into your mine and equipment status in near real time in the palm of your hand.

Proud track record

Intov8 provides software solutions to some of the world's largest mining companies.

Our software has been developed by miners for miners. We have a deep understanding of the mining industry worldwide. Our team has proven experience in mine systems development, business improvement, system integration and mine production analysis.

The **Corvus** suite of products and our experienced implementation team can create a solution to minimise your downtime and increase productivity.
