Fixing problems as they occur

The ability to monitor site operations in real time has significant advantages for the mining industry.

With Intov8’s innovative Short Interval Control (SIC) solution, supervisors can now work more efficiently and overcome problems as they occur.

During a shift, supervisors can identify issues that may affect production and take immediate action to rectify these problems. Our unique Corvus Wall software gives supervisors an instant snapshot of operations on mobile devices, desktop computers and display monitors.

Other companies provide Short Interval reporting – often via email – but that outdated process can result in costly delays. Intov8 takes it a giant leap further.

Corvus Wall for Short Interval Control goes beyond Short Interval reporting by:

- Opening lines of communication between key personnel on site to enable an instant response.
- Allowing supervisors to comment and interact directly with operators in the field. They can now manage their team to act quickly on any decisions or changes.
- Enabling supervisors to understand problems that occur at a glance – and in real time.
- Giving supervisors the ability to make instant decisions from information provided rather than waiting for lengthy reports to be processed.

The ability to monitor site operations in real time has significant advantages for the mining industry.

With Intov8’s innovative Short Interval Control (SIC) solution, supervisors can now work more efficiently and oversee problems as they occur.

During a shift, supervisors can identify issues that may affect production and take immediate action to rectify those problems. Our unique Corvus Wall software gives supervisors an instant snapshot of operations on mobile devices, desktop computers and display monitors.

Other companies provide Short Interval reporting – often via email – but that outdated process can result in costly delays. Intov8 takes it a giant leap further.

Corvus Wall streamlines the entire process.

Using Corvus Wall, Corvus Live Monitor and Corvus Dashboard mobile apps, supervisors can take immediate action to address problems that may affect production – including weather delays, breakdowns, damaged or faulty vehicles and long truck queues at loaders.

Corvus is widely recognised by industry as one of the premier business intelligence solutions on the market today.

Easy integration with current systems

You can partner Corvus with any data source for practical, cost-effective solutions.

A simple way to analyse and automate systems

Practical, easy-to-use applications that enhance information and improve operational efficiency.

Increased productivity and profitability

Identify challenges and opportunities then adjust in real-time for better productivity:

- Immediate and measurable operational and financial benefits
- Practical, easy-to-use applications that enhance information and improve operational efficiency.
- Ground-breaking new mobile apps Corvus Live Monitor, Corvus Dashboard and Corvus Wall that provide a window into your mine and equipment status in near real time in the palm of your hand.

Proud track record

Intov8 provides software solutions to some of the world’s largest mining companies. Our software has been developed by miners for miners. We have a deep understanding of the mining industry worldwide. Our team has proven experience in mine systems development, business improvement, system integration and mine production analysis.

The Corvus suite of products and our experienced implementation team can create a solution to increase your downtime and increase productivity.

Key benefits

- Allows for Short Interval Control (SIC) from a mobile device
- Provides a cost-effective software solution
- Simplifies the entire process and transforms the way miners manage time data
- Enables supervisors to monitor operations in the field
- Provides live access to key metrics
- GIVES supervisors a window into the mine and equipment status in near real time
- SUPERVISES can comment and interact directly with operators in the field
- REDUCES reporting time by identifying and addressing issues in near real-time
- INTEGRATES to any source system
- REDUCES downtime
- INCREASES productivity, and profitability.
